1 Missed-calls report

Presales, Day 2 of the customer rhythm (slide 5)

WIREFRAME

Step 1: WhatsApp message

Step 2: the report

What to notice

1 Turns AI into numbers the owner knows

The owner does not buy "AI". They see 87 missed calls and what those calls were worth in their own currency.

2 Built from their own call log

Shown only with the owner's permission, using the real line. Nothing is invented: the estimate says exactly which assumption it uses.

3 Busy times, not just a total

The two peaks (2-4 PM and 8-10 PM) show when a person cannot answer, which is exactly when the AI Concierge helps.

4 Same maths as slide 4

60 orders x EGP 300 = EGP 18,000 sales. At 40% profit that is about EGP 7,200 a month, roughly 2.9x the EGP 2,500 Plus fee.

5 One clear next step

A 3-minute demo follows, then "Start first month free". The first month is free to remove the risk of trying.

2 Self-setup on the Digital Store

Guided go-live, step 2 of 5 (Phase 3: up to 30 self-setups a month)

6 Reviewed remotely by our team before go-live

Save and continue

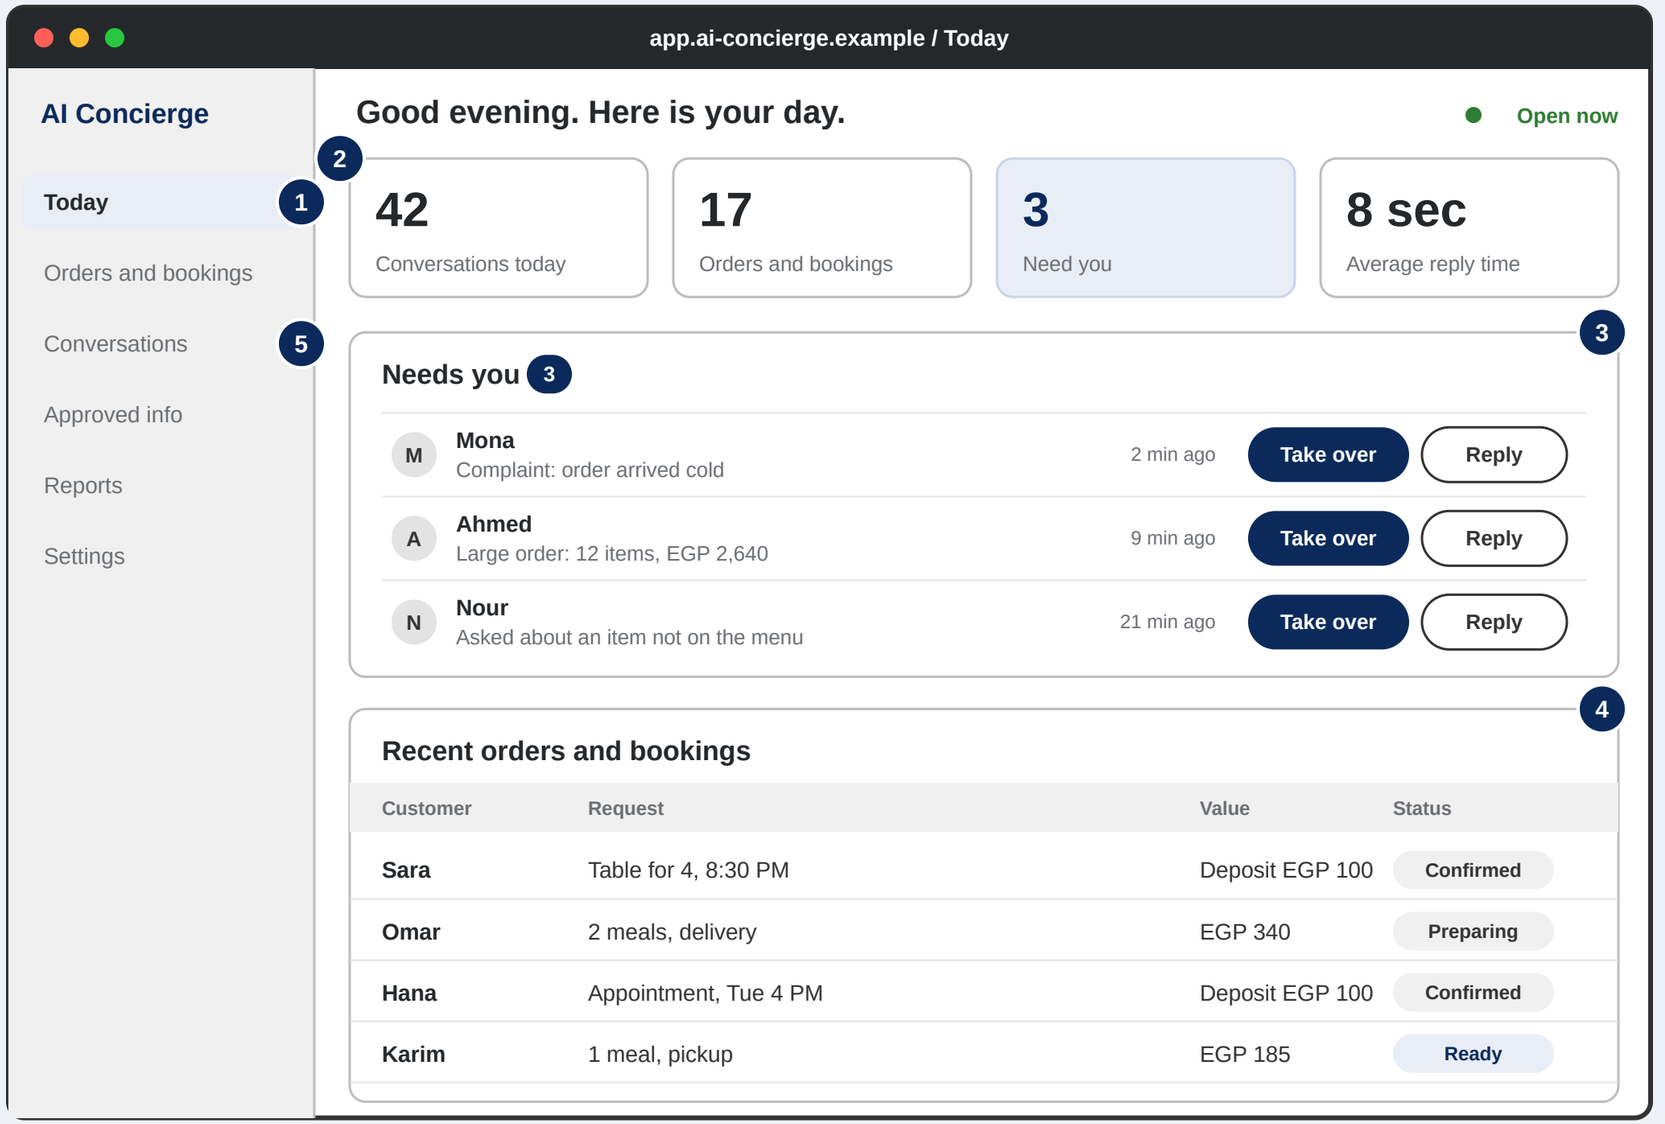

What to notice

1. **Five short steps**
   Choose plan, Business info, Connect line, Test, Go live. The owner always sees where they are and what is left.
2. **Template-based setup**
   Fields are pre-filled from a business template. The target is a full setup in under 1 hour, the gate for Phase 1.
3. **Only approved information**
   The AI answers only from what the owner enters here. Menu, hours and rules are the "approved info" and can be edited anytime.
4. **Handover rules**
   The owner decides when a person takes over, for example complaints, large orders or anything the AI is unsure about.
5. **Live preview**
   The owner sees how a customer chat will look before going live, which builds trust and catches mistakes early.
6. **Remote check before go-live**
   Vodafone reviews the setup remotely, so self-setup does not use the delivery team's capacity.

3 Owner dashboard and handover inbox

Daily use: the owner sees everything and steps in only when needed

WIREFRAME

What to notice

1 Everything in one place

Today, orders and bookings, conversations, approved info, reports and settings. No technical knowledge needed.

2 Four numbers that matter

Conversations, orders and bookings, items that need the owner, and reply speed. They answer "is it working for me?".

3 "Needs you" inbox

When the AI is unsure, or a rule from the handover list applies, the conversation lands here with a summary and a Take over button.

4 Orders in a plain table

Each order shows the customer, what they asked for, the value and status, so the owner can act without opening the chat.

5 Reviewed daily

Conversations the AI could not finish are reviewed daily during hypercare (slide 6) and fed back into approved info.

4 Acceptance and sign-off

Delivery rotation (slide 6): the customer signs only when it works

WIREFRAME

1 Timeline

Day 0	Day 1	Days 2-3	Days 4-5	Days 5-19	Day 30
Handover	Kick-off	Set up	**Acceptance**	Go live + training	Results review

2 Acceptance tests

4 of 5 passed

Greets in Arabic and English	Pass
Answers 10 sample questions correctly	Pass
Takes an order or booking and confirms it	Pass
Hands over to staff on request	Pass
Replies correctly outside opening hours	Fix in 48 hours

3

4 Sign-off

By signing, the business confirms the AI Concierge works as agreed and goes live on its line.

Signature

Sign and go live

Unlocks when all 5 tests pass

5 The same rhythm for every customer

Agree (Tests and dates) > **Test** (Customer tries it) > **Fix** (Within 48 hours) > **Sign** (All tests pass) > **Chase** (Reminder day 2, AM day 5)

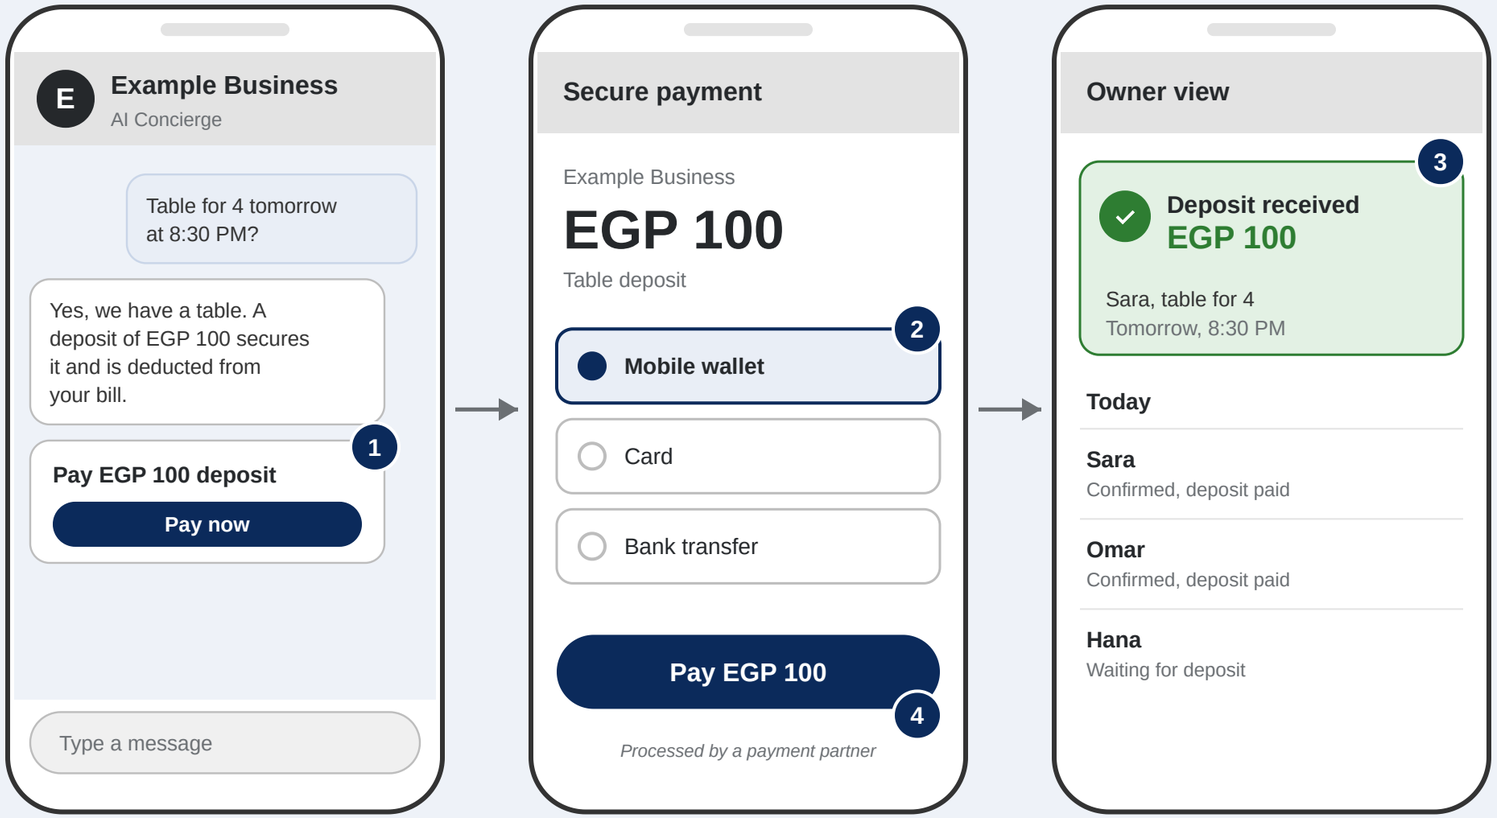

What to notice

1. **A clear timeline**
   Handover on Day 0, kick-off Day 1, set up Days 2-3, acceptance Days 4-5, go live and two weeks of close support, then a results review on Day 30.
2. **Five acceptance tests**
   Agreed with the customer in advance. The customer sees each test as pass or fix, so there are no surprises at sign-off.
3. **Fix within 48 hours**
   A failed test gets a named owner and a due date. The fix window is part of the promise, not a favour.
4. **Sign only when all pass**
   The button stays locked until every test passes. This protects both the customer and Vodafone.
5. **Agree, Test, Fix, Sign, Chase**
   The same five-step rhythm for every customer, which is how a team of 50 deliveries a month across all solutions stays organised.

5 Phase 2: payment link and deposit

Months 5-8: fewer no-shows, money collected before the visit

WIREFRAME

Customer: chat | **Customer: payment page** | **Business owner: dashboard**

Follow-up included in the plan

5

Hi Sara, a reminder: your table for 4 is tomorrow at 8:30 PM.
Reply 1 to confirm or 2 to change.

Reminders cut no-shows and are sent in the customer's own chat, using approved templates.

What to notice

1 The AI asks for a deposit
When a booking needs one, the Concierge sends a payment link in the same chat. No app to install, no call back.

2 Pay with the method they trust
Mobile wallet, card or bank transfer through a payment partner. The customer stays on a page they recognise.

3 The owner sees it instantly
The deposit appears in the dashboard and the booking is confirmed automatically.

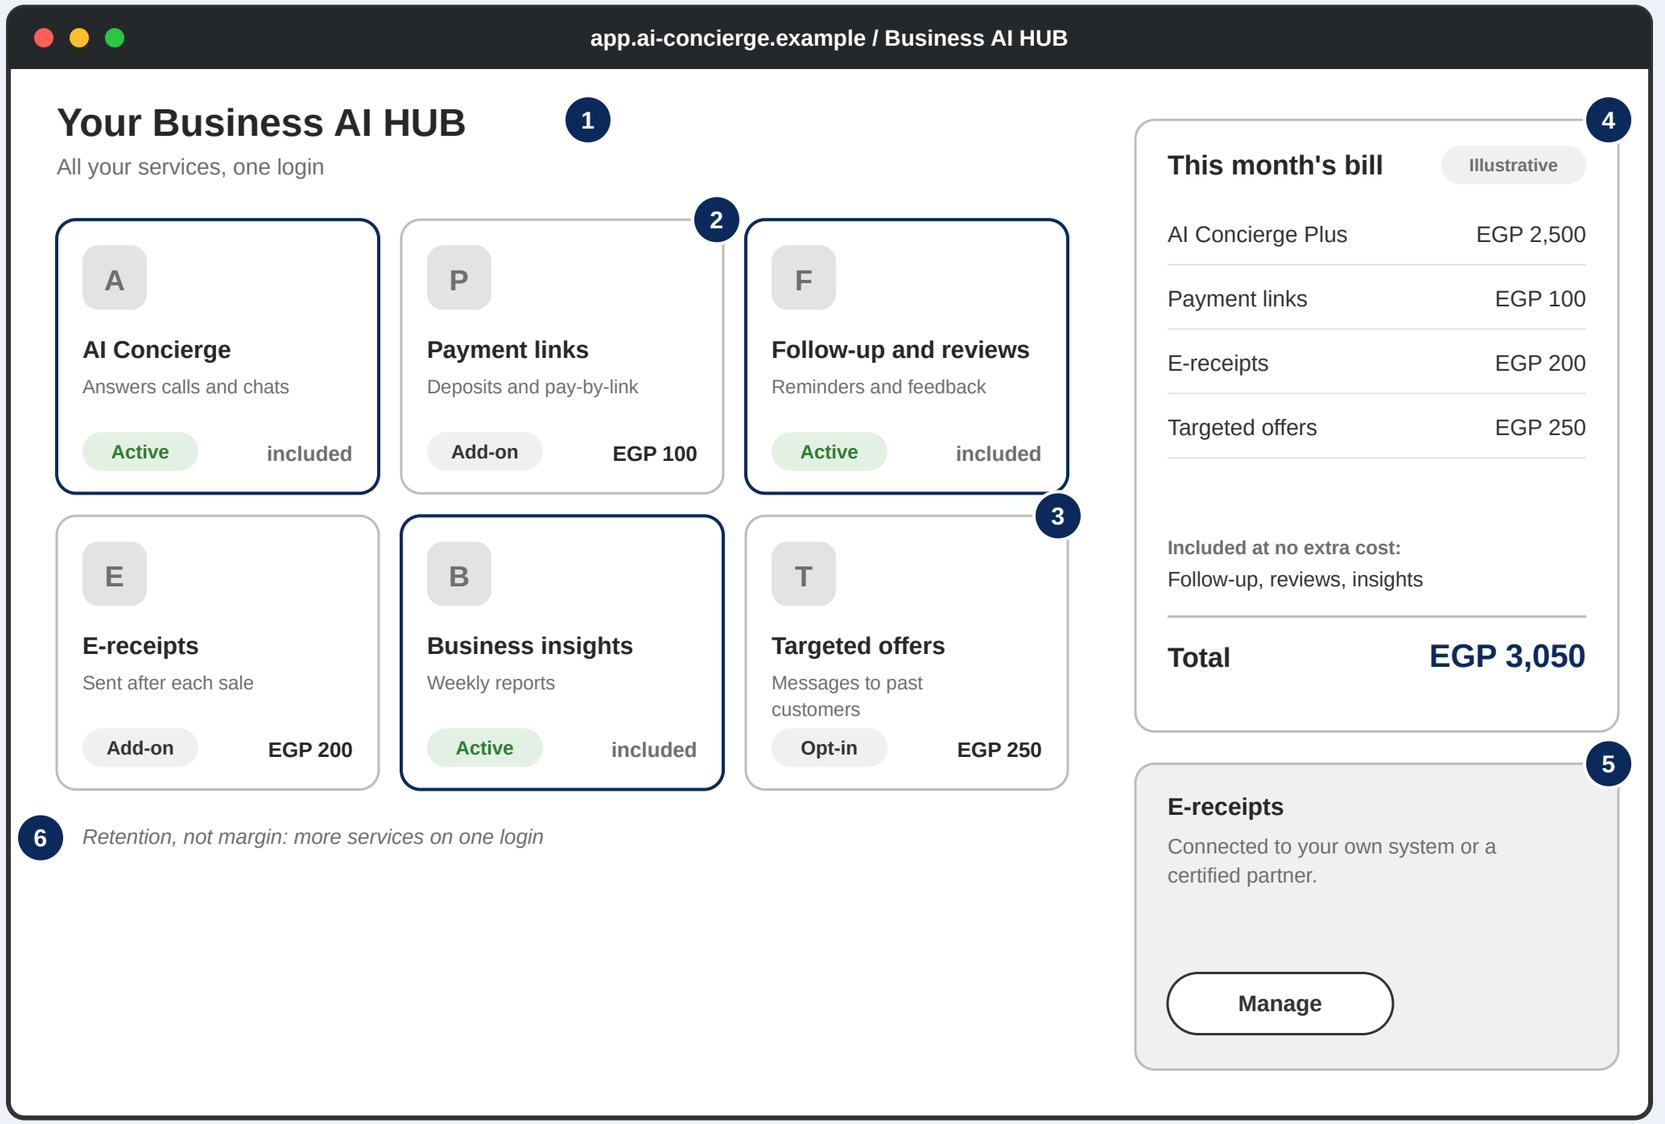

4 Who pays the fee
The gateway fee (standard rate 2.75% + EGP 3 per payment, e.g. Paymob) is paid by the business. Vodafone does not absorb it.

5 Prices are illustrative
The EGP 100 add-on is an example price, not in the deck, to be validated in the pilot.
Follow-up messages are included in the plan.

6 Phase 3: the Business AI HUB

Months 9-12: all services on one login and one bill

WIREFRAME

What to notice

1 One home for every service

AI Concierge plus the services added in Phases 2 and 3. The owner turns on only what they need.

2 Clear status on each tile

Active, add-on or opt-in, so the owner always knows what is running and what it costs.

3 Included versus add-on

Follow-up, reviews and insights are included in the plan. Payment links, e-receipts and targeted offers are optional add-ons.

4 One monthly bill

The plan and add-ons appear on one bill. Prices shown are illustrative, to be validated in the pilot.

5 E-receipts, safely

Receipts connect to the business's own system or a certified partner. Vodafone does not replace their accounting.

6 A retention play

More services on one login make the customer harder to lose. The aim is lower churn, not higher margin per customer.

Phase 2: months 5-8
20 setups a month

Phase 3: months 9-12
30 self-setups a month

Why this journey works

Each stage proves value before the next one starts. The owner first sees the problem in numbers, then a working result in days, then more services on the same login. Vodafone moves from selling one plan to being the business's daily tool, which is why the later phases are about keeping customers, not squeezing margin.
